

*HipLinkXS is a powerful, two-way wireless communication software solution that seamlessly integrates into any CAD platform that provides reliable, secure and robust wireless communication to any device, anywhere, any time.*

## HipLinkXS for Emergency Response

The effectiveness of Emergency Response personnel can be broken down into a single factor - the ability to receive and act on timely information. Fire, Police, EMS and other responders need secure, reliable access to critical information faster than ever before, available on a variety of devices. Emergency dispatch centers need the ability to communicate with multiple departments and agencies in multiple areas to coordinate the proper response to a variety of situations. Today, more than ever, Emergency workers need HipLinkXS.

HipLinkXS is a wireless messaging software solution that provides law enforcement, fire departments, utilities, and emergency dispatch centers with text, voice and fax messaging capabilities to virtually any device. HipLinkXS expands the reach of CAD systems beyond TAP or Dial-Up to include the most efficient messaging protocols available today.

Secure, fast, reliable and feature rich, HipLinkXS helps ensure critical messages are delivered on time, every time.

- **Real Time Alerts** ~ integrates seamlessly to virtually any CAD system which allows dispatchers to initiate alerts as they occur, vastly improving response times.
- **Two-way Messaging** ~ empower mobile responders to: confirm messages, request additional information or personnel, check the status of equipment and facilities, from anywhere, any time.
- **Message Escalation** ~ escalate messages or alerts automatically until they are acknowledged and received.

*"HipLinkXS is a critical component of our Computer Aided Dispatch application, and considerably reduces the time it takes for critical information to get to officers out in the field," Larry Caddell, CEO Southern Software. "Fast response to emergencies is one of our top issues. Semotus Solutions is a veteran in the urgent wireless notification industry."*

## Powerful Communication Solution

Building a standard wireless solution is not enough for mission critical applications. In order to satisfy the demands of emergency professionals, a wireless communication solution must be reliable, robust, secure and perform at the highest standards. HipLinkXS is designed and built with Best-of-Breed technology from an industry leader in Wireless Communications.

Capable of handling over 40,000 messages per hour, with complete redundancy and fail-over, HipLinkXS provides messaging peace of mind. And, backed by the Gold Standard for Support and Service, HipLinkXS ensures that your critical messaging needs are met today while providing a platform for the future.

Enhance your Emergency Communication capabilities with HipLinkXS.

HipLinkXS provides Emergency Response Centers enhanced wireless connectivity to meet the challenges of today's critical messaging needs. The ability to send secure, mission-critical information as it occurs to the right responders can be the difference between life and death. HipLinkXS gives emergency workers peace of mind.

Reduce the amount of time it takes to respond to and dispatch emergency personnel.

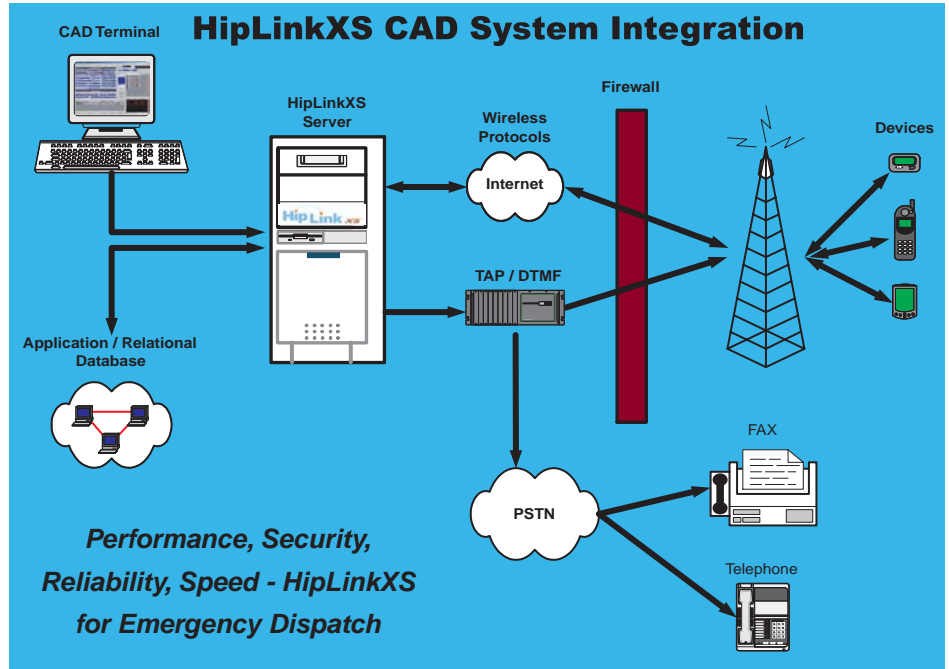

Improve the effectiveness of emergency dispatch centers.

Automatically mobilize personnel from multiple departments, agencies, states or offices.

Leverage existing infrastructure by seamlessly integrating into CAD and other applications.

Reduce paging costs and lower overall Total Cost of Ownership.

Saves time, saves money, saves property, saves lives.

Critical message notifications and alerts any time, anywhere, to any device, that's the HipLinkXS advantage.
